

# Ubuntu 12.04/14.04 VPN Manual

## Instalation

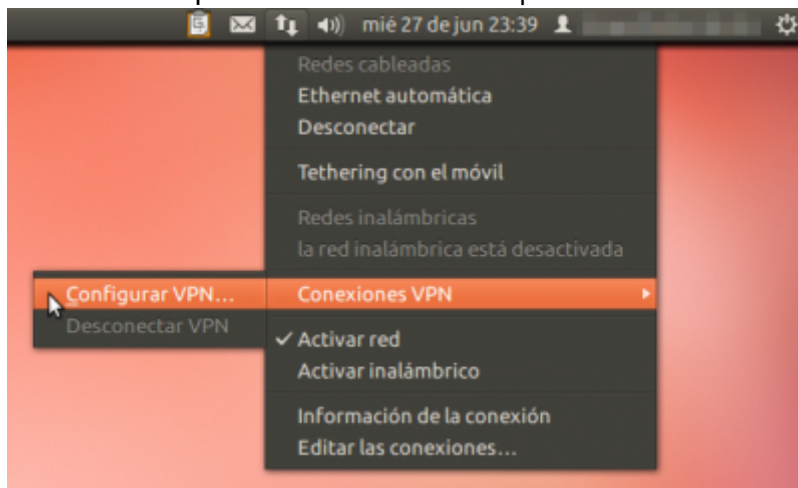

1. Uncompress the file `vpn-udp-22-user.name-config.zip` that can be found in [your user home, in the VPN folder](#).
2. Open the Ubuntu Software Center and search «*network manager*».

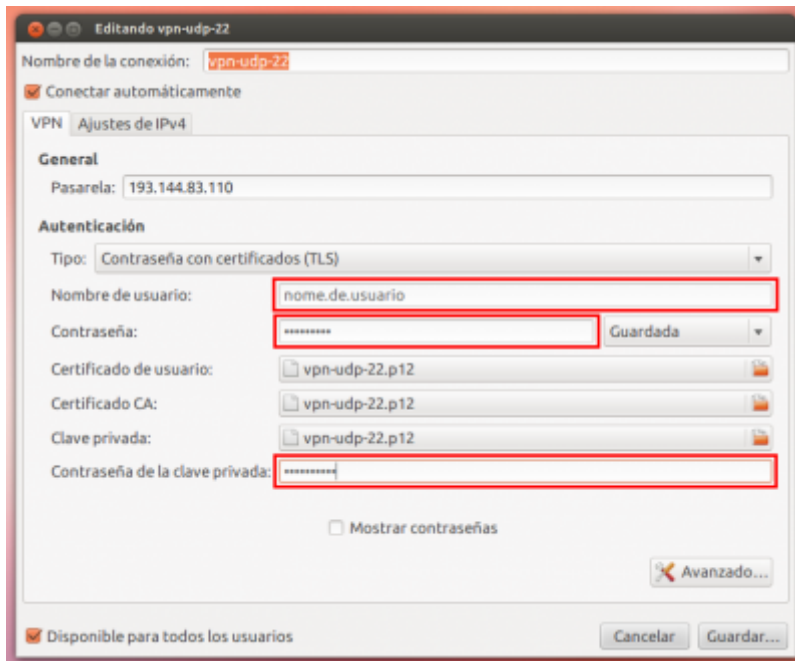

3. In «*Network (network-manager-gnome)*» press *More info*, check «*Network management framework (OpenVPN plugin GNOME GUI)*» and select *Apply*.

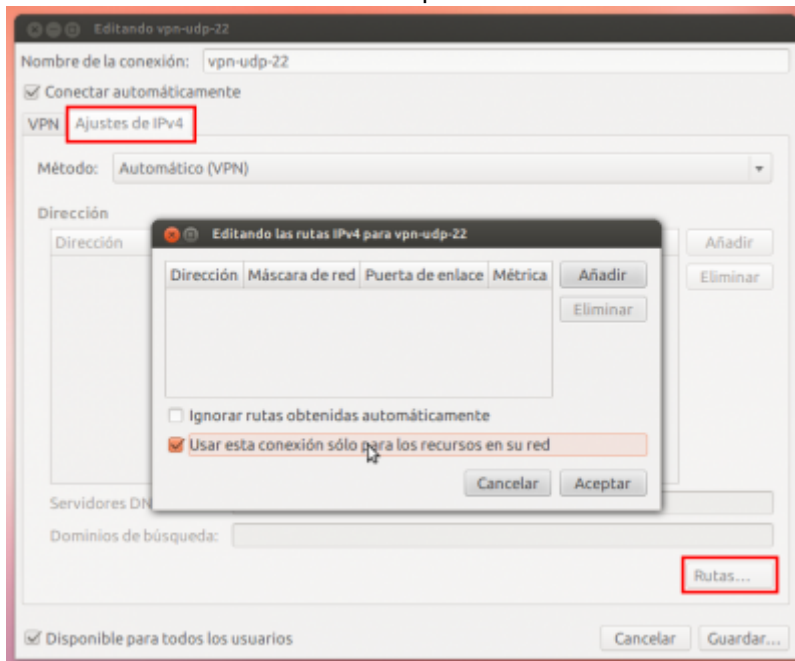

4. In the network connection icon select *VPN Connections» Configure VPN...* Choose *Import* (In Ubuntu 14.04, select «*Add...*» and in the new window choose «*Import VPN configuration...*») and search the file `vpn-citius.ovpn` that was inside the zip file.

5. In the new window enter your username and then twice your password, once in the *Password* field and again in the *Private key password* field (same password for both fields).

6. In the IPv4 settings tab select Routes... In the new window check the option Use this connection only for resources on its network and press Ok.

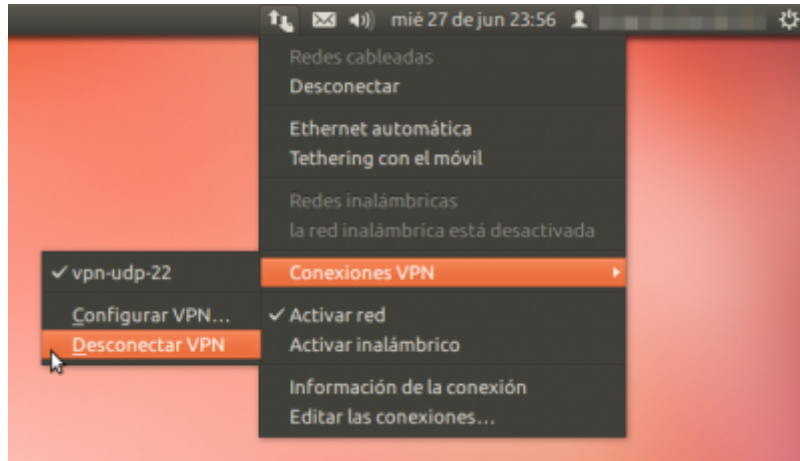

- 7. To have the names of USC computers resolved correctly <sup>1)</sup>: In the same tab, in the dropdown list, choose Automatic (VPN) addresses only. In the field DNS Servers add 193.144.75.9, 193.144.75.12 and in Search domains add usc.es.
- 8. Lastly press Save...

### Connect and disconnect from the VPN

To connect press the network connection icon and choose *VPN Connections » vpn-citius* (name can change depending on the name introduced during installation).

To disconnect press again the network connection icon and choose *VPN Connections» Disconnect VPN*.

1)  
This is necessary for example to access a service by its name, like the cloud, the Matlab license servers, etc.
